

Reeya Bansal

Toronto, ON | reeyabansal317@gmail.com | LINKEDIN | GITHUB

Summary

AI/ML Engineer with experience building agentic AI systems, RAG pipelines, and cloud-native ML infrastructure on AWS. Skilled in Python, LangChain/LangGraph, and LLM workflow design, with a track record of improving system reliability and reducing operational effort.

Skills

Languages: Python, Java, C, R, SQL

AI/ML: LangChain, LangGraph, RAG, LLM Workflows, scikit-learn, Prompt Engineering, Model Fine-Tuning

Cloud & Infrastructure: AWS (S3, OpenSearch, DynamoDB, Bedrock), Docker, Terraform

Tools: Power BI, Power Automate, Git, Linux

Data: Pandas, NumPy, Data Analysis, Data Pipelines

Experience

AI/ML Engineer Intern, GenAI Lab – IBM, Toronto, ON May 2025 – Present

- Designed a multi-source AWS-based data pipeline (S3, OpenSearch, DynamoDB) for retrieval-augmented generation, including ingestion and structuring of architectural and historic platform data into retrieval-ready stores.
- Developed a multi-agentic AI system using Python and LangGraph, creating informed operating procedures for incoming incidents that reduced MTTR by 35%.
- Assisted deployment and networking of 5 AI agents and 5+ data stores to AWS using Terraform, securing infrastructure with an AWS Client VPN layer.
- Built an LLM-powered workflow using Python and LangChain to automate vulnerability analysis from SonarQube, XRAY and OWASP reports.
- Spearheaded department-wide AI adoption by evaluating, testing, and documenting fine-tuning approaches (eg: InstructLab) for internal use.
- Engineered a Java-based Cryptography-powered RTGS PoC for cross-border payments with real-time tracking dashboard, reducing settlement latency by 40%.

IT Strategy Intern – Munich Re, Toronto, ON May 2024 – Aug 2024

- Automated 5+ business workflows using Power Automate and Power BI, reducing manual effort by 40%
- Gathered business and technical requirements for IT modernization initiatives, translating them into Power BI dashboards for real-time analytics and decision-making
- Leveraged LeanIX to generate enterprise architecture reports, surfacing technical debt and dependency risks across 100+ applications

Data Science Intern – ReNew Power, India May 2023 – Jul 2023

- Built Python data pipelines using Pandas and Numpy for to pre-process and analyze 1,000+ thermal images per day, identify hotspots and reducing manual review time by 60%
- Developed a YOLOv8-based image classification and detection system for to detect damages in solar panels

Education

University of Toronto, St. George Campus, Toronto, ON Sept 2022 – Dec 2026 (Expected)

Bachelor of Science, Computer Science – GPA: 3.64, Dean's List

- Relevant Coursework: Theory of Computation, Data Analysis, Machine Learning, Software Design, Data Structures, Computer Architecture, Artificial Intelligence
- Awards: Regents Scholarship, Roy Alvin Hope Award, Kingston Award, International Scholar
- Completion of Arts & Science Internship Program (16 months Work Experience)

Projects

Fraudulent Job Detection – Python, scikit-learn, Logistic Regression 2024

- Built a classification model to detect fraudulent job postings using engineered text and metadata features

Electricity Consumption Prediction – R, ANOVA 2024

- Analyzed electricity consumption patterns using statistical modeling to identify significant predictive factors

News App with World Map UI – Java, Clean Architecture 2023

- Developed a news aggregation application with an interactive world map interface following clean architecture principles
